2021- 22

ACKNOWLEDGEMENT

The satisfaction that accompanies the successful completion of the task would be put incomplete without the mention of the people who made it possible, whose constant guidance and encouragement crown all the efforts with success.

We wish to express my deep sense of gratitude to **Ms. Koti Tejaswi**, Assistant professor for their able guidance and useful suggestions, which helped us in completing the design part of potential project in time.

We particularly thankful to **Dr. M.A Jabbar**, Professor & Head of the Department, Computer Science & Engineering for his guidance, intense support and encouragement, which helped us to mould our project into a successful one.

We show gratitude to our honorable Principal **Dr.J.V.R.Ravindra**, for having provided all the facilities and support.

We avail this opportunity to express our deep sense of gratitude and heartfelt thanks to **Dr Teegala Vijender Reddy**, Chairman and **Sri Teegala Upender Reddy**, Secretary of VCE, for providing congenial atmosphere to complete this project successfully.

We also thank all the staff members of **Engineering Design Thinking Team** for their valuable support and generous advice. Finally, thanks to all our friends and family members for their continuous support and enthusiastic help.

B.Richa Reddy - 19881A0568

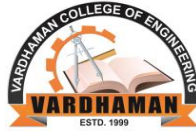

C.Karthik Reddy - 19881A0570

D.Sai Tejaswi - 19881A0574

Abstract

There are 1.77 million homeless people in India, or **0.15%** of the country's total population, consisting of single men, women, mothers, the elderly, and the disabled. As to solve the problems of funding money or necessities physically, this web platform provide powerful and easiest way to donate funds for those people all over the India.

This project generally summarizes the activities carried out in the design and implementation of the Website based Funds collector. This FundRaiser organization is a non-profit organizational system in which non-governmental organizations and donors can come in and request and donate funds etc. These objectives are creating online payment and some volunteers will be working in helping the poor using the funds raised through website. The project's design was then constructed to visualize the attainment of these aims using Unified Modeling Language diagrams as well as Data Flow Diagram. In the implementation part of this project, the waterfall methodology is used for the development of this project.

Generally this website is used as a platform between the donors and the needy. The volunteers can contact the admin using contact page and get to know the information about the funds and also donating in person.

CHAPTER 1

INTRODUCTION

1.1 Motivation

The reason/motivation why we started this project is because of the lack of Charity management organizations in India. And the major problem is collecting funds for needy in person is really hard these days So, this platform helps to collect and manage funds from all over the world and use for needy people. There are 1.77 million homeless people in India, or 0.15% of the country's total population, consisting of children, single men, women, mothers, the elderly, and the disabled. As to solve the problems of funding money or necessities physically, this web platform provide powerful and easiest way to donate funds for those people all over the India from anywhere. There is no gainsaying that the charity foundation is one of the key service industries in the world. In the early stage of industry development, Donors and NGOs were relatively small in scale, mostly small office either found in a mosques or church or occupying small space in an organization. With the growing concern about one 's personal believe, the charity organization has grown significantly in recent years. Large charity funding chains mushroomed along-side the emergence of a wide variety of charity organizations and technology in the world.

1.2 Scope

The scope of this project is limited to designing and implementation of a web-based charity management system to help individuals that are in need of donors for the clients. This is a web-application that will be a platform for donating funds for the needy people from all over the world. The major functionalities were implemented, and website works perfectly.

1.3 Objectives

We propose to build a website to donate funds for needy and for the distribution of donations between charities, giving people the ability to volunteer in helping the poor in person, and to inform about the poor who need help

- The main objective of this project is to provide a platform for people to donate funds for the poor, homeless people & animals in India from all over the world.
- Development of income resources (donation).

- Management and distribution of contributions to all the needy.
- Optimum provision and utilization of operational, physical, and human resources.
- To raise as many as funds from all over the world for the needy in India.
- To make donating easier online than in person.

1.4 Expected Deliverables

- Project plan
- Design documents
- Work breakdown
- Scope statement
- Source code
- Project

CHAPTER 2

LITERATURE REVIEW

2.1 History

This chapter is based on the literature review of the techniques and technology used in this project and its features. Essentially, the literature review will help in comparing the historical context of the past project as well as how this project will differ from what others have done, thus helping to rationalize the need for this project.

Throughout the year's foundations, schools, and causes wherever have created innovative approaches to fund-raise. Generally, selling item, or requesting cash house to house or via telephone, have overwhelmed the methods utilized for gathering reserves. Today, associations wherever are thinking of inventive and enlivened strategies that fund-raise as well as advance other way of life changes too.

2.2 Applications

- It provides platform for donating funds.
- Simple Functionality.
- Volunteering in helping poor.

2.3 Advantages & Disadvantages

Advantages:

- Easy to use with the help of simple User Interface.
- Clients get a clearer understanding and complete 'feel' of the functionality of the website.
- Functionality can be easily identified when missing.

Disadvantages:

- When the application is incomplete it may cause the application not to be used as until the full system was designed.
- Changes may occur, and it may not be good for the project, it can easily disturb the workflow of the entire software development team and could be expensive to implement.

CHAPTER 3

METHODOLOGY

3.1 Proposed Design

The proposed system is unique from all the existing systems, It's based on waterfall model methodology. It's chosen as it is a website with simple functionality. It provides simple user interface and with better user experience. The landing page consists of all the donating sections and the website contains a Gallery section where the users can view all the works done in person for needy with the raised funds through website, also a contact page where users can contact our FundRaiser foundation and become volunteers to help the poor in person.

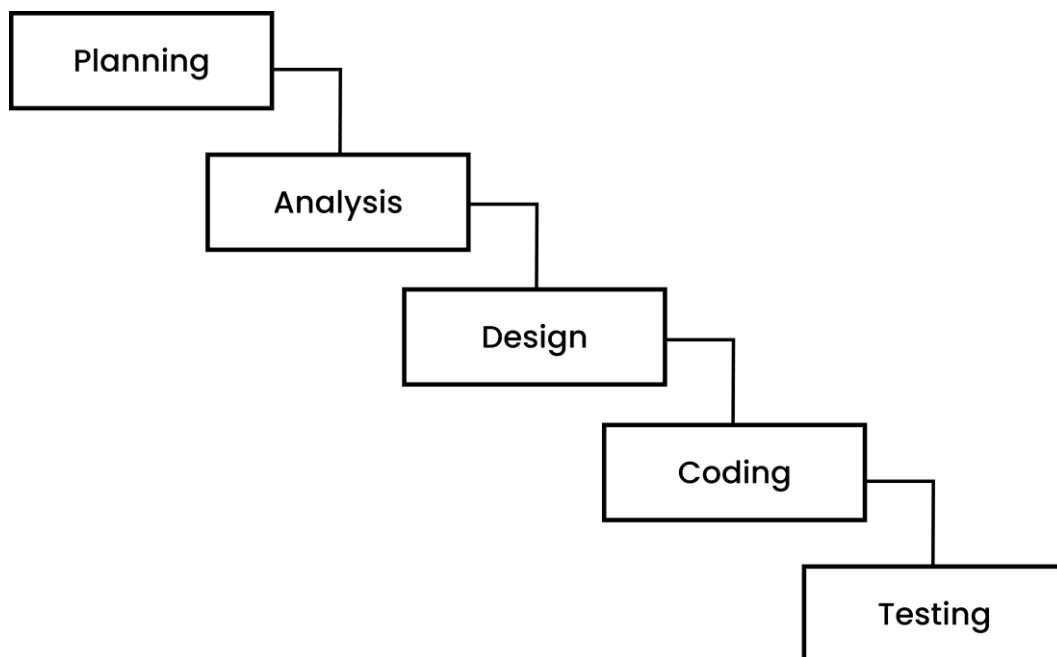

Figure 3.1

Waterfall Methodology:

Waterfall model was the first process model also referred to as linear sequential life cycle model. It was the earliest Software development life cycle (SDLC) approach that is used for software development. In a waterfall model, each phase must be completed before the next phase & there is no overlapping in the phases. It is the best model for small projects.

3.2 Flow Diagrams & observations

3.2.1 Flow Diagram:

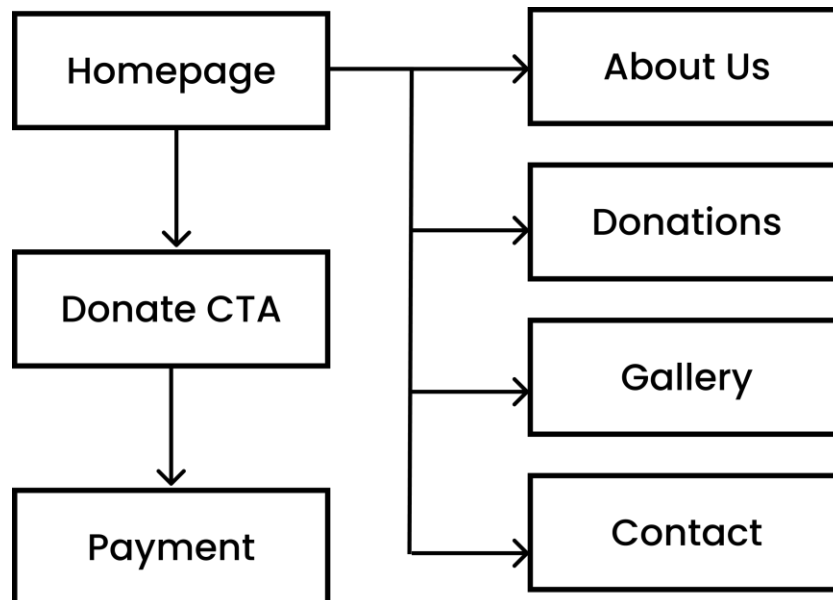

Figure 3.2

3.2.2 Architecture Diagram

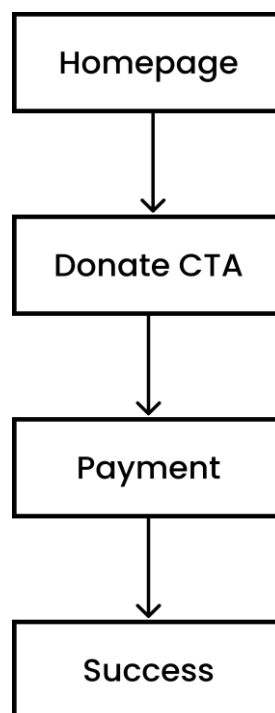

Figure 3.3

3.2.3 Usecase Diagram:

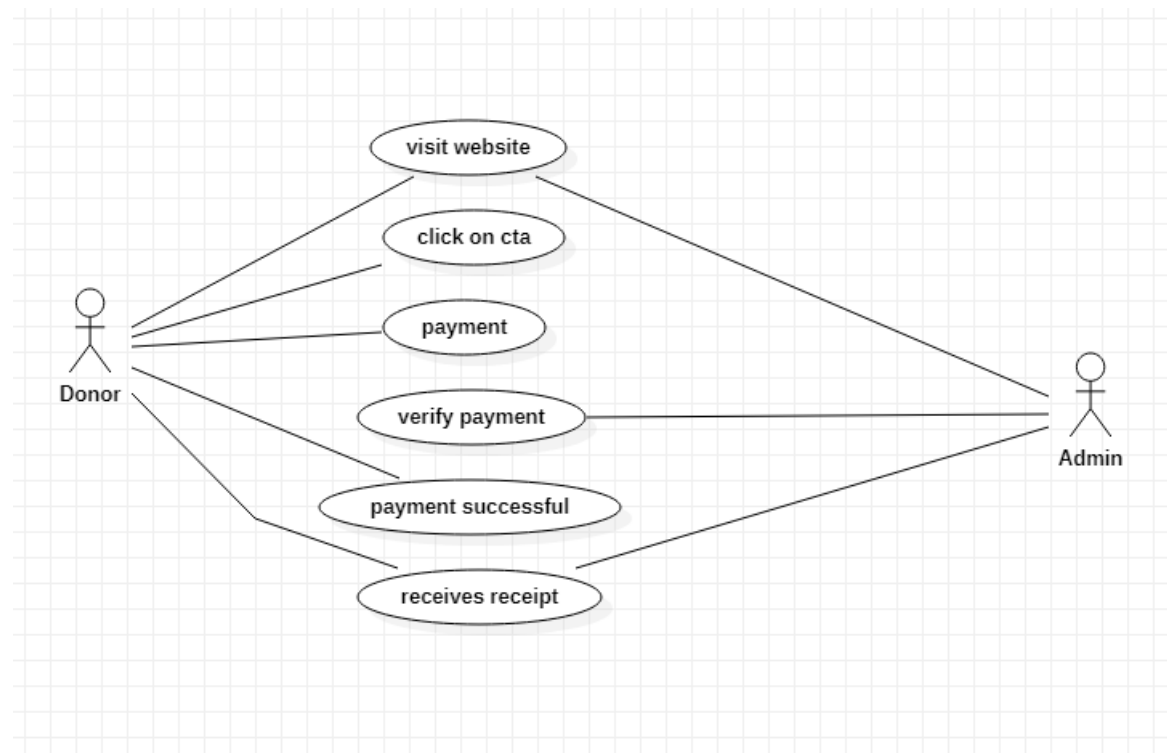

Figure 3.4

3.3 Challenges towards implementation

- In time of user research for finding block cases.
- In case of Hardware/Software requirements.
- Testing and Debugging of errors.
- Change of system requirement because of different devices.

CHAPTER 4

ANALYSIS

4.1 Software Requirement Specification

4.1.1 Technologies used:

Frontend:

- HTML
- CSS
- Bootstrap, Bulma(CSS Libraries)
- Javascript

Backend:

- Php

4.1.2 Software Requirements

- This web application can run on any operating system.
- System should be connected to a server/Internet.

4.1.3 Hardware Requirements

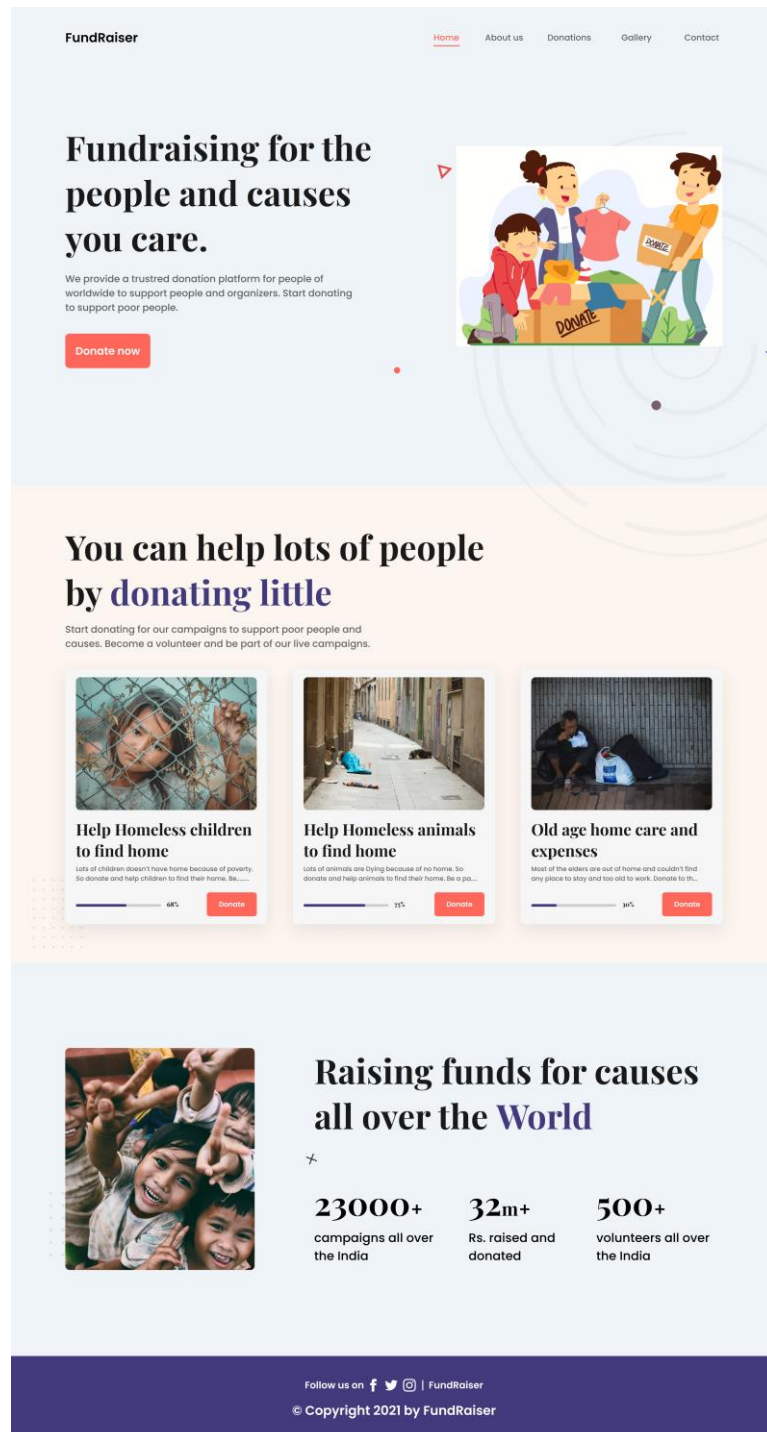

- Recommended RAM: 512MB.
- Super VGA with a resolution of 1024 x 768.

CHAPTER 6

CONCLUSIONS

This website provides a computerized version of donating funds instead of funding in person which is difficult. Therefore, we developed a website as a platform between the organization and donors where the users can donate funds for the needy with the help of integrated payment mode called Razorpay. The site is responsive so that the users can use on any device without any breakdowns in the user experience. We conclude that the website is fully functional and easy to use with the help of simple user interface.

The user can view all the works done by the volunteers in a form a Gallery. The one who donates and the organization both will have a payment receipt in case of any payment issues.
